

SiteLine™ Asset Manager

Optimize Reliability and Peace of Mind

If you don't know what's broken, you can't fix it. You also can't implement streamlined asset management, make data-informed decisions or schedule proactive maintenance. At On Now Digital, we are passionate about transforming complex information into simple, actionable data that improves your overall electric power system. That's why we developed SiteLine™ asset manager. **SiteLine is a versatile, cloud-based SaaS tool that is changing the way you access and interpret information** related to your transformer and core infrastructure. **It identifies potential issues quickly and efficiently.** Finally, you can manage information overload for good.

Simplify Complex Data

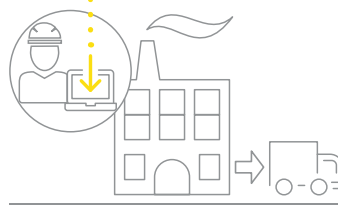

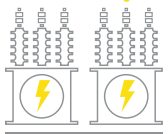

SiteLine rolls up complex data into easily actionable information presented in Red/Amber/Green (RAG) statuses. Whether you need a top-level summary or an in-depth analysis, just follow the red to locate your issues.

Work With Data You Recognize

SiteLine is non-vendor-specific and supports multiple import formats and auto-import application-specific program interfaces (APIs) for a truly source-agnostic solution. It also lets you choose what form you use to export your reliability information.

Set Thresholds That Work for You

Designed to IEEE standards to support ISO compliance, SiteLine offers additional built-in flexibility that enables you to set thresholds unique to your requirements and establish parameters, criticality and prioritization.

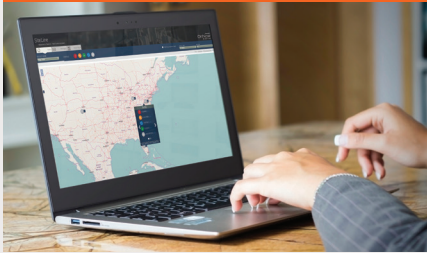

Who Benefits From SiteLine™?

SiteLine empowers you to make better asset management decisions – on every level.

Corporate

- Clear line of sight into assets and their state
- Insight into large fleets over multiple locations
- Improved risk management

Management

- RAG status rollup and priority list
- Ability to upload infrared images
- Proactive decision-making

Maintenance

- Detailed equipment summaries
- Quick breakdown of asset type, size, age and criticality
- Easy report generation

When We Say Simple, We Mean Simple

On Now Digital understands that data chaos is a daily source of frustration that can lead to catastrophic costs. That's why we designed SiteLine to be a single solution to a wide range of reliability and maintenance challenges. It delivers:

Hands-off data management

- Easily aggregates data from multiple sources
- Supports SiteLine XML, CSV, JSON; TOA4 CSV, RPC (automatic import); SDMyers CSV

Meaningful information summary

- Tailors result information in actionable, user-centric summaries
- Includes specific views (executive to technician) and featured views (map, status, equipment, list and organization list)
- User specifies default view

Simplified decision-making

- All results conform to RAG status standard with customizable limits on a per-customer basis
- Determines each asset's Priority Score based on available data including test results status and equipment information (size, age and criticality)

Easily accessible asset information

- Acts as a single information source that all company members can manage
- Assigns each asset a Document Library that accepts image and document files, as well as allows users to enter comments

Start getting the right information to the right people, so you can make the right decisions for your electric power system. Call **330.942.0474** or visit **onnowdigital.com** to request a live demo today!
